The game is better than I expected it to be. I've run the full round trip once, and I also made another trip from Times Square to Queens. As somebody who rides the 7 from Times Square to 33rd Street everyday, my standards were pretty high. In terms of scenery, they did very good. They placed railroad tracks where appropriate, they put buildings appropriate to the route, and did good with the stations. They even put in specific buildings, such as Aviation High School between 33rd and 40th streets. The train is nowhere near as good as the scenery. The cab is okay. The TVO and CVR indicators are both present, but do not work. The sounds aren't terrible, but the motor sounds are not very good. The physics are pretty off from where they should be, making the train kind of tough to operate at times. Also, the story line is not very good. I didn't want a story, just to simulate train operation. It seems that you'll be fine not participating in the whole story line thing after the first time you play, but I'm not sure. The story line doesn't seem how it should be considering how things work at the MTA. I also want to point out that the game has a few minor bugs, as it is a new release. The last thing I want to say upsets me is that there are no timers present throughout the route, but it is still playable without them. I haven't used the conductor mode yet, so I'll edit this once I have done so.. Couldn't believe my eyes when I saw this pop up on Steam - I spent so many hours in the late 80s and early 90s playing this on a variety of old-school Macs. This seems to be pretty much a perfect recreation of the classic, down to the amazing sound effects. Blem. Blem. Blem. AaaAAAaah!. 10/10 would be crushed by Uncle Lou's huge arms again. Shoot bad guys while avoiding innocents in this fun rail shooter with a price that can't be beat.

Complete goals to increase in rank to unlock gold and other bonuses. Use the gold to unlock bonuses like extra points for headshots or keeping bonus items like double-points, sacks of gold, etc. on screen longer.

I do wish we could change the cursor style and color from default white. You'll also need to uncheck the full-screen box first before you can change the resolution. Check it again if you want to return to full-screen. Other than this, the game runs great. Pick it up!. In so many ways, very silly and unpolished, yet there's definitely enough content for a few dollars. Surprisingly lots of content, in fact.. I love the "vaporwavey" look and the sounds!

Its great to play with friends, so calming. GAaahhhhh these white screens are horrendous... building along then BAM White for 5 seconds or soo.... This "feature" or bug can die.

. Great Tower Defense game. Easy to learn & difficult on higher levels. Good graphics & smooth gameplay. Whats not to love?. Great mecha game, worth getting if you can.

Waste of \$10.00...none of the scenarios work!!!. Ran over my cattle with the combine, fun times.. 250 рублей? Она то и 50 не стоит. Русские, если вы это читаете, никогда не покупайте это!! (0.01/10). this is the legedary "WIZRDRY"'s grand-grand-children type RPG.

If you are an ordinary professional gamer, i don't recommned this game.

But if you are an elite HENTAI-gentleman and never hesitate to spend hours of endless battles seeking just one rare underware for your favorite girl, i strongly recommend this^-^

i don't have PS-VITA, so i'm happy playing formerly PS-VITA-ONLY games with PC.. Multiwinia is a game crafted by gods for those who know better. It is a fine masterpiece of gaming and a shining light in the♥♥♥♥♥♥ of the steam store, it is among the greatest games, like woodcutter simulator 2013.

It combines strategy and simplicty effortlessly, it's such an easy to use game but so hard to master. Everytime you play you will find a new thing and say "oh that's so cool" and you will know, multiwinia is the best.

Because it is.. 13\/6\/15 Full retail review not Early Access. Based on a single player game.

Well It's not exactly a scam Like Linden Labs pulled with Patterns, but this title has suddenly announced after a long time away that it has moved from Early Access to final release, and in my opinion it still feels like Early Access.

But let's start with positives. Although I give a thumbs down, there is still gaming to be had here.

Open world\galaxy generated worlds with crafting of simple objects with of course much mining for resources. Simple rewards screen to upgrade your skills and unlock objects with the objective of building a ship to get you off the rock your on and onto another rock.

And the negative is centred around the word I keep using, "simple". It's why it still feels like a development version. Gameplay is very simplistic and unchallenging, features are a bit half baked and it feels like a demo. As a single player game it is over very quickly and your left wanting much much more which is a shame as the core concept is still exciting.

As an Early Access review I would be giving this a thumbs up as good work in progress, but as V4 is the release version then I cannot recommend it.

Maybe development will continue and my view will change. This marks the end of the Space Pilgrim saga. If you're planning to buy the game, I would recommend the whole series as they will make so much more sense playing all together.

This final episode does offer more quests/tasks to do, and you'll be able to play longer than the other 3. Choices do matter in this episode, and you'll only be able to get certain acheivements if you make certain choices. For me I liked this series, it was a short but fun play. The ending is fulfilling as well to me. (Without giving away any spoilers!) :D. It is free, it is not a game, just sit and watch. And fear ...
